Nurse Call Panel

It is the unit that allows calls made from call units to be viewed and monitored from the nurse's desk. It can display simultaneously calls from 5 different addresses in an audiovisual way. Each display line has 4 digits. Communicates wirelessly with the call buttons.

Bedhead Call Unit

It is the battery operated unit mounted at the patient's bed allowing him to call the nurse in case of emergency situation.

It ends a low battery warning to the nurse call panel when the battery is weak. When the call is made, it is confirmed by the led on the button. The button id can be changed from the panel as wanted. Communicates wirelessly with the call panel.

Handset Call Unit

It is a device connected to the bedhead call unit that the patient can use to call the nurse in case he could not reach the bedhead unit. When the call is made, it is confirmed by the led on the button.

WC /Bathroom Call Unit

It is a battery operated corded unit that sends emergency call information when the cord handle is pulled. When the battery is weak, it sends low battery warning to the call panel. When the call is made, it is confirmed by the led on the button. The button id can be changed from the panel as wanted. Communicates wirelessly with the call panel.

Door Warning Lamp

It is a warning lamp mounted over the room's door which can lights up with 4 different colors according to the call situation made from the patient's room.

Wireless Transmitter

It is used to strengthen the call signal in cases that call signals could not reach the panel due to physical reasons.

RF Receiver

It used for reporting made calls at the central server.

Pager Call Device

Mobile device to reach personnel in emergency code situations.

Pager Transmitter

Signaling devices used in case of emergency code calls to reach pager devices.
