

## Wireless Personnel Call System & Emergency Call System

## Wireless Personnel Call System

### Personnel Call Panel

It is the unit that enables calls made from call buttons to be monitored by the personnel in charge. It can display simultaneously calls from 3 different addresses in an audiovisual way. Each display line has 3 digits. It communicates wirelessly with call buttons.

### Call Buttons

Practical call button which can be fixed on walls or over /under the tables. When the call is made, it is confirmed by the led on the button. The button id can be changed from the panel as wanted. It communicates wirelessly with the call panel.

### Door Warning Lamp

It is a warning lamp mounted over the room's door which lights up when a call is made from that room.

### Wireless Transmitter

It is used to strengthen the call signal in cases that call signals could not reach the panel due to physical reasons.

## Emergency Call System

### Emergency Call Panel

It is the unit that enables calls made from pagers to be monitored by personnel incharge. It displays simultaneously calls from 3 different addresses in an audiovisual way. Each display line has 3 digits. Communicates wirelessly with call buttons.

### Corded Call Unit

It is a battery operated corded call unit that sends emergency call information when the cord handle is pulled. When the battery is weak, it sends low battery warning to the call panel. When the call is made, it is confirmed by the led on the button. The button id can be changed from the panel as wanted. Communicates wirelessly with the call panel.

### Call Buttons
